

24/7 [®]

SMART SURVEILLANCE

Advanced Off-Site Monitoring

24/7 Smart Surveillance - primary benefits:

- Cost savings by reducing manpower
- Reduces risk to people and property
- Customised solutions
- Commercial & Residential
- Improve access control
- Reduce employee theft
- Hold-up prevention
- Site surveillance in high-risk areas

24/7 Smart Surveillance is the utilisation of a CCTV system specifically engineered for the protection of premises. Through modern means of internet telemetry, our dedicated CCTV Operators can gain access to our clients' security systems remotely; thereby affording us the ability to control many different peripherals, for example bi-directional audio, smoke/pepper activation devices or new/existing security infrastructure such as alarm systems, fire systems, and electric fences. This revolutionises our off-site monitoring service offering into a state of the art, proactive protection solution which is tailored-made to the requirements of our clients.
